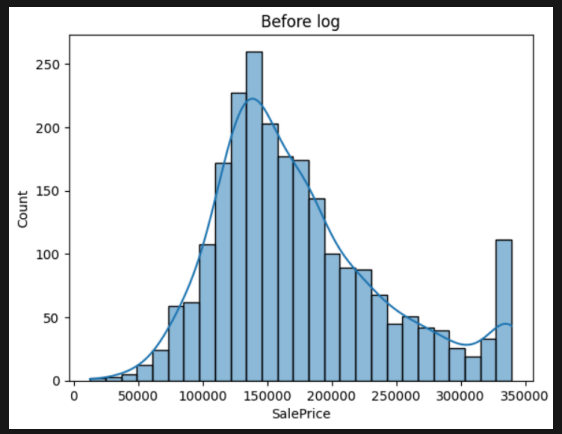
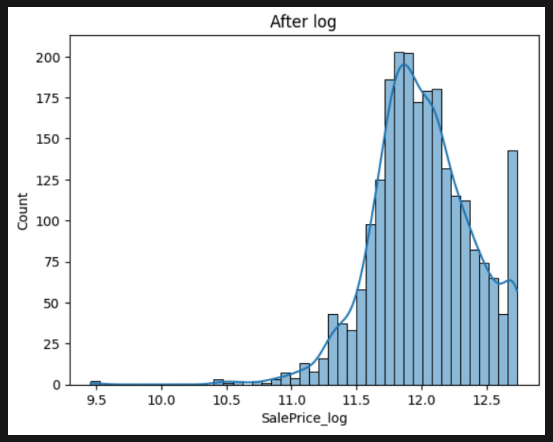
AMES HOUSING DASHBOARD

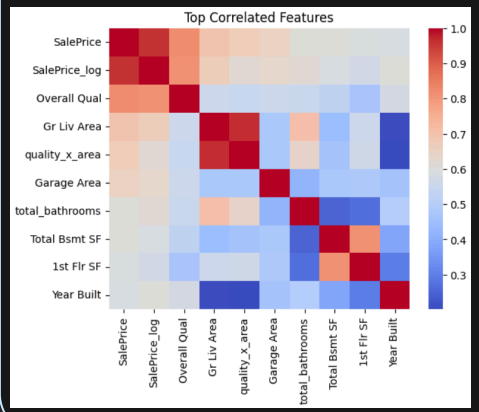
Before & After Log Transformation





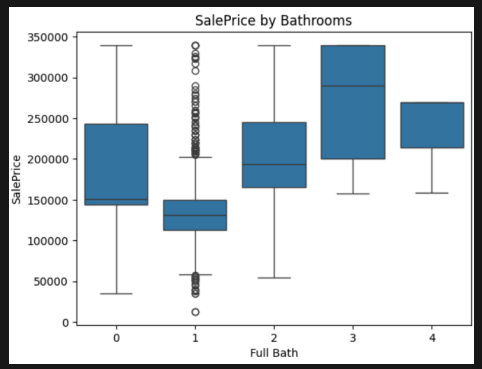
The original SalePrice distribution is skewed to the right. After applying log, the distribution becomes more balanced and easier to analyze.

Correlation Heatmap



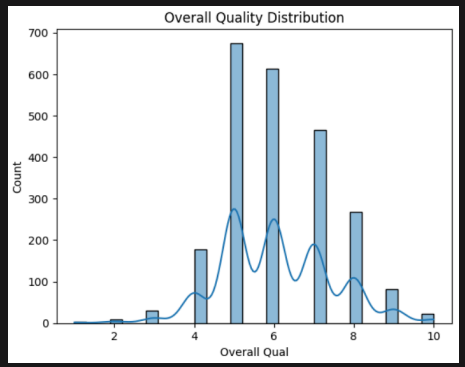
SalePrice is strongly related to overall quality and living area. These features are important for predicting house prices.

SalePrice by Bathrooms



Houses with more bathrooms generally have higher prices, showing that additional features increase value.

Overall Quality Distribution



Most houses have medium quality levels. Very low and very high quality houses are less common.

Area vs Price with Quality

There is a positive relationship between house size and price. Higher quality houses tend to have higher prices.
